## Introduction:

In the first stage of our Venn Diagram implementation we allow users to seamlessly add elements between two sets and find the intersection of their elements. With our efficient yet simplistic approach users will find it easy to organize data in order to better see the relationship between their data.
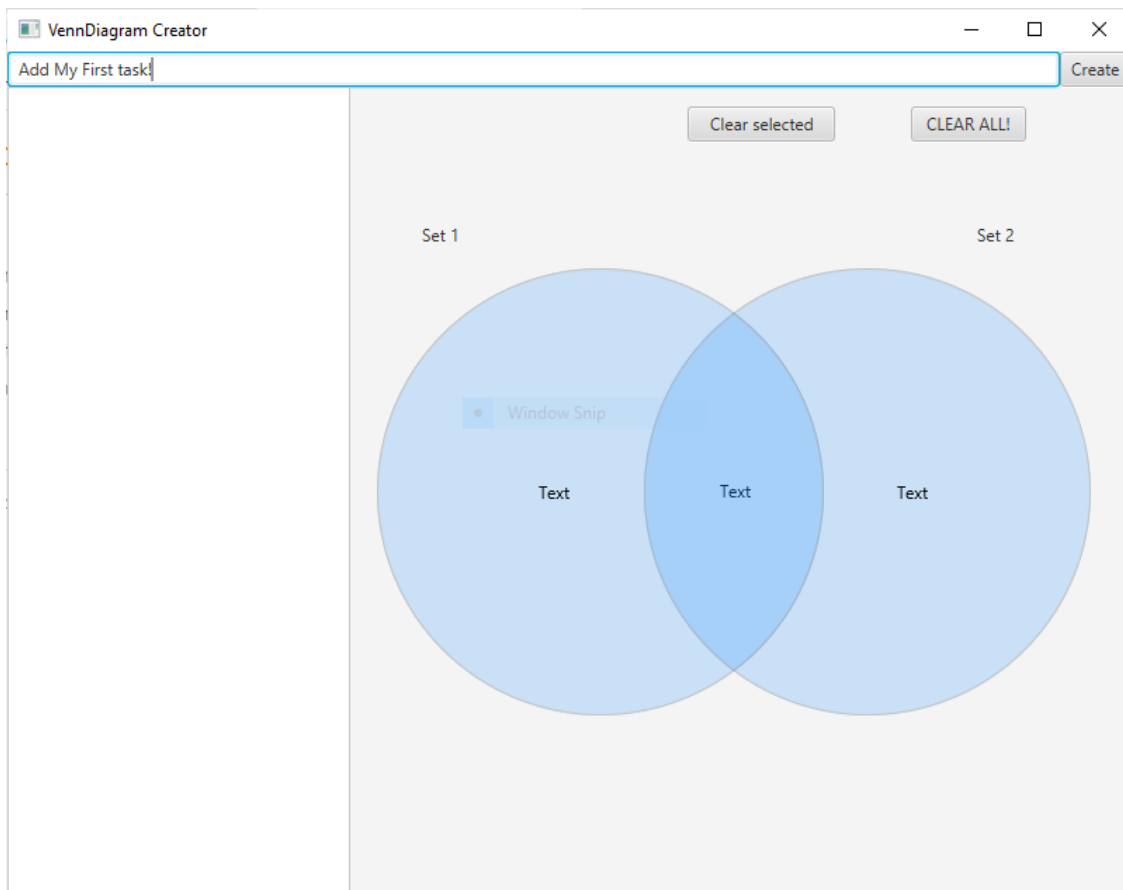

How to get Started:

The main functionality of the Venn Diagram application includes adding and removing tasks to the display. This section will focus on the following tasks:
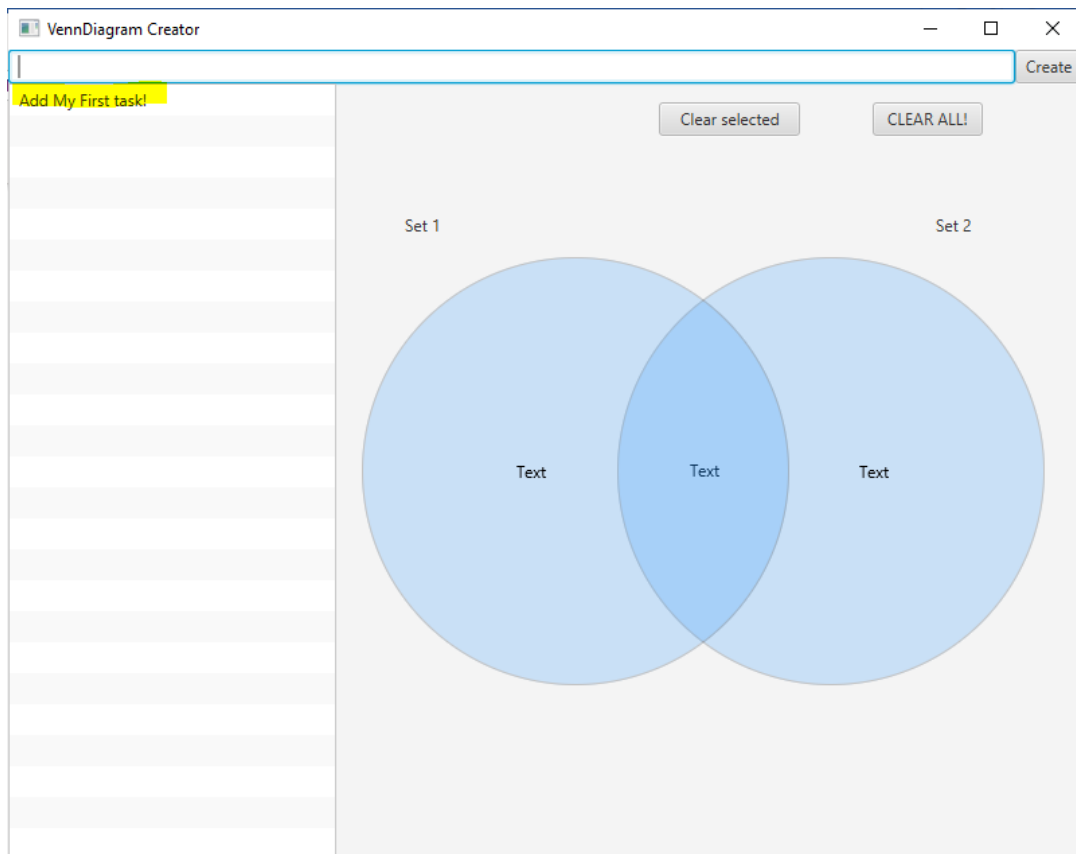

- Adding a task to the Task List
- Adding a task to the Venn Diagram
- Clearing the display

Adding a Task to the Task List

To add a task, simply type in the top text field and click the "Create" button or click enter.

Upon clicking "Enter" on your keyboard or clicking the "Create" button the task will be added to the task list on the left panel.

Adding a task to the Venn Diagram

Once tasks are populated into the Task List they can be dragged and dropped into the Venn Diagram. Click and hold while dragging the element to its respective circle. See the diagrams on the following page for a visual representation.

Clearing the Display:

To clear the display a user as a choice between clearing a specific task or clearing the entire Venn Diagram. To clear a task, select the task in the task list and then click "Clear Selected". If you would like to clear the entire list, click "CLEAR ALL!".
